

Software Requirements Analysis and specification

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Requirement Engineering

Requirements describe

What not How

Produces one large document written in natural language contains a description of what the system will do without describing how it will do it.

Crucial process steps

Quality of product

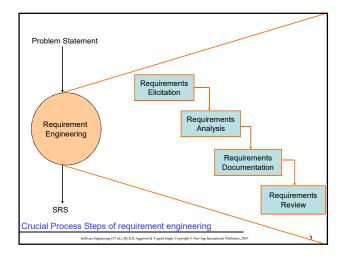

Process that creates it

Without well written document

- -- Developers do not know what to build
- -- Customers do not know what to expect
- -- What to validate

ioftware Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

2

Requirement Engineering

Requirement Engineering is the disciplined application of proven principles, methods, tools, and notations to describe a proposed system's intended behavior and its associated constraints.

SRS may act as a contract between developer and customer.

State of practice

Requirements are difficult to uncover

- Requirements change
- Over reliance on CASE Tools
- Tight project Schedule
- Communication barriers
- Market driven software development
- · Lack of resources

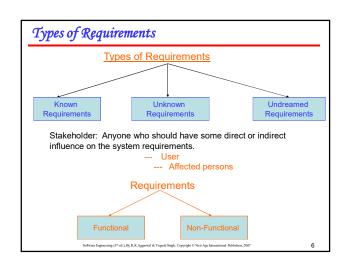

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogeah Singh, Copyright © New Age International Publishers, 2007

Requirement Engineering

Example

A University wish to develop a software system for the student result management of its M.Tech. Programme. A problem statement is to be prepared for the software development company. The problem statement may give an overview of the existing system and broad expectations from the new software system.

Software Engineering (3st ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Types of Requirements

Functional requirements describe what the software has to do. They are often called product features.

Non Functional requirements are mostly quality requirements. That stipulate how well the software does, what it has to do.

Availability
Reliability
Usability
Flexibility

Maintainability
Portability
Testability

For Users

For Users

For Users

For Users

Types of Requirements

User and system requirements

- User requirement are written for the users and include functional and non functional requirement.
- · System requirement are derived from user requirement.
- The user system requirements are the parts of software requirement and specification (SRS) document.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Types of Requirements

Interface Specification

· Important for the customers.

TYPES OF INTERFACES

- Procedural interfaces (also called Application Programming Interfaces (APIs)).
- · Data structures
- · Representation of data.

Software Engineering (3st ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Feasibility Study

Is cancellation of a project a bad news?

As per IBM report, "31% projects get cancelled before they are completed, 53% over-run their cost estimates by an average of 189% & for every 100 projects, there are 94 restarts.

How do we cancel a project with the least work?

CONDUCT A FEASIBILTY STUDY

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Feasibility Study

Technical feasibility

- Is it technically feasible to provide direct communication connectivity through space from one location of globe to another location?
- Is it technically feasible to design a programming language using "Sanskrit"?

Software Engineering (3st ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Feasibility Study

Feasibility depends upon non technical Issues like:

- Are the project's cost and schedule assumption realistic?
- Does the business model realistic?
- Is there any market for the product?

iodware Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Feasibility Study

Purpose of feasibility study

"evaluation or analysis of the potential impact of a proposed project or program."

Focus of feasibility studies

- · Is the product concept viable?
- Will it be possible to develop a product that matches the project's vision statement?
- What are the current estimated cost and schedule for the project?

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Feasibility Study

Focus of feasibility studies

- How big is the gap between the original cost & schedule targets & current estimates?
- Is the business model for software justified when the current cost & schedule estimate are considered?
- Have the major risks to the project been identified & can they be surmounted?
- Is the specifications complete & stable enough to support remaining development work?

Software Engineering (3rd ed.), By K.K. Aggurwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Feasibility Study

Focus of feasibility studies

- Have users & developers been able to agree on a detailed user interface prototype? If not, are the requirements really stable?
- Is the software development plan complete & adequate to support further development work?

Software Engineering (3rd cd.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Requirements Elicitation

Perhaps

- Most difficult
- Most critical
- · Most error prone
- Most communication intensive

Succeed

effective customer developer partnership

Selection of any method

- 1. It is the only method that we know
- 2. It is our favorite method for all situations
- 3. We understand intuitively that the method is effective in the present circumstances.

Normally we rely on first two reasons.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

40

Requirements Elicitation

1. Interviews

Both parties have a common goal

- --- open ended
- --- structured

Interview

Success of the project

Selection of stakeholder

- 1. Entry level personnel
- 2. Middle level stakeholder
- 3. Managers
- 4. Users of the software (Most important)

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Requirements Elicitation

Types of questions.

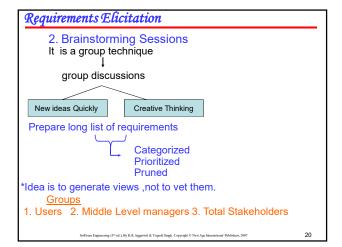

- · Any problems with existing system
- Any Calculation errors
- · Possible reasons for malfunctioning
- · No. of Student Enrolled

 $Software Engineering \ (3^{nd}\ ed.), By\ K.K.\ Aggarwal\ \&\ Yogesh\ Singh,\ Copyright\ @\ New\ Age\ International\ Publishers, 2007$

- 5. Possible benefits
- 6. Satisfied with current policies
- 7. How are you maintaining the records of previous students?
- 8. Any requirement of data from other system
- 9. Any specific problems
- 10. Any additional functionality
- 11. Most important goal of the proposed development

At the end, we may have wide variety of expectations from the proposed software.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Requirements Elicitation

A Facilitator may handle group bias, conflicts carefully.

- -- Facilitator may follow a published agenda
- -- Every idea will be documented in a way that everyone can see it.
- -- A detailed report is prepared.
- 3. Facilitated Application specification Techniques (FAST)
- -- Similar to brainstorming sessions.
- -- Team oriented approach
- -- Creation of joint team of customers and developers.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Requirements Elicitation

Guidelines

- 1. Arrange a meeting at a neutral site.
- 2. Establish rules for participation.
- 3. Informal agenda to encourage free flow of ideas.
- 4. Appoint a facilitator.
- 5. Prepare definition mechanism board, worksheets, wall stickier.
- 6. Participants should not criticize or debate.

FAST session Preparations

Each attendee is asked to make a list of objects that are:

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Requirements Elicitation

1. Part of environment that surrounds the system.

- 2. Produced by the system.
- 3. Used by the system.
- A. List of constraints
- B. Functions
- C. Performance criteria

Activities of FAST session

- 1. Every participant presents his/her list
- 2. Combine list for each topic
- 3. Discussion
- 4. Consensus list
- 5. Sub teams for mini specifications
- 6. Presentations of mini-specifications
- 7. Validation criteria
- 8. A sub team to draft specifications

Software Engineering (3st ed.), By K.K Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Requirements Elicitation

4. Quality Function Deployment

-- Incorporate voice of the customer

Technical requirements.

Documented

Prime concern is customer satisfaction

What is important for customer?

- -- Normal requirements
- -- Expected requirements
- -- Exciting requirements

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Steps

- 1. Identify stakeholders
- 2. List out requirements
- 3. Degree of importance to each requirement.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Requirements Elicitation

5 Points : V. Important 4 Points : Important

3 Points : Not Important but nice to have

2 Points : Not important

1 Points : Unrealistic, required further

exploration

Requirement Engineer may categorize like:

(i) It is possible to achieve

(ii) It should be deferred & Why

(iii) It is impossible and should be dropped from consideration

First Category requirements will be implemented as per priority assigned with every requirement.

influence Engineering (20 ad) By V. V. Announcel 6, Varrach Sinch, Committee P. Narra Ann International Bublishum 2007

Requirements Elicitation

5. The Use Case Approach

Ivar Jacobson & others introduced Use Case approach for elicitation & modeling.

Use Case - give functional view

The terms

Use Case

Use Case Scenario

Often Interchanged
But they are different

Use Case Diagram

Use Cases are structured outline or template for the description of user requirements modeled in a structured

language like English.

Software Engineering (19-cd.), Bly K. K. Aggerval & Yogesh Singh. Copyright © New Age International Publishers, 2007

Requirements Elicitation

Use case Scenarios are unstructured descriptions of user requirements.

Use case diagrams are graphical representations that may be decomposed into further levels of abstraction.

Components of Use Case approach

Actor:

An actor or external agent, lies outside the system model, but interacts with it in some way.

Actor → Person, machine, information System

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Requirements Elicitation

- Cockburn distinguishes between Primary and secondary actors.
- A Primary actor is one having a goal requiring the assistance of the system.
- A Secondary actor is one from which System needs assistance.

Use Cases

A use case is initiated by a user with a particular goal in mind, and completes successfully when that goal is satisfied.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Requirements Elicitation

- * It describes the sequence of interactions between actors and the system necessary to deliver the services that satisfies the goal.
- * Alternate sequence
- * System is treated as black box.

Thus

Use Case captures who (actor) does what (interaction) with the system, for what purpose (goal), without dealing with system internals.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

*defines all behavior required of the system, bounding the scope of the system.

Jacobson & others proposed a template for writing Use cases as shown below:

1. Introduction

Describe a quick background of the use case.

2.Actors

List the actors that interact and participate in the use cases

3.Pre Conditions

Pre conditions that need to be satisfied for the use case to perform.

4. Post Conditions

Define the different states in which we expect the system

to be in, after the use case executes.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Requirements Elicitation

Use Case Guidelines

- 1. Identify all users
- 2. Create a user profile for each category of users including all roles of the users play that are relevant to the system.
- Create a use case for each goal, following the use case template maintain the same level of abstraction throughout the use case. Steps in higher level use cases may be treated as goals for lower level (i.e. more detailed), subuse cases.
- 4. Structure the use case
- 5. Review and validate with users.

Software Engineering (3st ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Requirements Elicitation

Use case Diagrams

-- represents what happens when actor interacts with a system.

-- captures functional aspect of the system.

Actor

Relationship between actors and use case and/or between the use cases.

- -- Actors appear outside the rectangle.
- --Use cases within rectangle providing functionality.
- --Relationship association is a solid line between actor & use cases.

Software Engineering (3st ed.), By K.K. Aggarwal & Yogeah Singh, Copyright © New Age International Publishers, 2007

Requirements Elicitation

*Use cases should not be used to capture all the details of the system.

*Only significant aspects of the required functionality

*No design issues

*Use Cases are for "what" the system is , not "how" the system will be designed

* Free of design characteristics

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 20

Use case diagram for Result Management System Maintain Student Details Maintain Result Details Login Administrator/DR Generate Result Reports Student/Thanker

1. Maintain student Details

Add/Modify/update students details like name, address.

2. Maintain subject Details

Add/Modify/Update Subject information semester wise

3.Maintain Result Details

Include entry of marks and assignment of credit points for each paper.

4. Login

Use to Provide way to enter through user id & password.

5. Generate Result Report

Use to print various reports

6. View Result
(i) According to course code
(ii) According to Enrollment number/roll number

Requirements Elicitation (Use Case)

Login

- 1.1 Introduction: This use case describes how a user logs into the Result Management System.
- 1.2 Actors: **Data Entry Operator** (i)
 - (ii) Administrator/Deputy Registrar
- 1.3 Pre Conditions : None
- 1.4 Post Conditions: If the use case is successful, the actor is logged into the system. If not, the system state is unchanged.

Requirements Elicitation (Use Case)

- 1.5 Basic Flow: This use case starts when the actor wishes to login to the Result Management system.
- (i) System requests that the actor enter his/her name and password.
- (ii) The actor enters his/her name & password.
- (iii) System validates name & password, and if finds correct allow the actor to logs into the system.

Use Cases

Alternate Flows 1.6

1.6.1 Invalid name & password

If in the basic flow, the actor enters an invalid name and/or password, the system displays an error message. The actor can choose to either return to the beginning of the basic flow or cancel the login, at that point, the use case ends.

Special Requirements: 1.7

None

Use case Relationships:

None

Use Cases

2. Maintain student details

- 2.1 Introduction: Allow DEO to maintain student details. This includes adding, changing and deleting student information
- DEO 22 Actors
- Pre-Conditions: DEO must be logged onto the system before this use case begins.

Use Cases

- Post-conditions : If use case is successful, studen information is added/updated/deleted from the system. Otherwise, the system state is unchanged.
- 2.5 Basic Flow : Starts when DEO wishes to add/modify/update/delete Student information.
 - (i) The system requests the DEO to specify the function, he/she would like to perform (Add/update/delete)
 - (ii) One of the sub flow will execute after getting the information.

- ☐ If DEO selects "Add a student", "Add a student" sub flow will be executed.
- ☐ If DEO selects "update a student", "update a student" sub flow will be executed.
- ☐ If DEO selects "delete a student", "delete a student" sub flow will be executed.

2.5.1 Add a student

(i) The system requests the DEO to enter:

Name

Address Roll No

Roll No Phone No

Date of admission

(ii) System generates unique id

Software Engineering (3st ed.), By K.K. Aggurwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

2.5.2 Update a student

- (i) System requires the DEO to enter student-id.
- (ii) DEO enters the student_id. The system retrieves and display the student information.
- (iii) DEO makes the desired changes to the student information.
- (iv) After changes, the system updates the student record with changed information.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

2.5.3 Delete a student

- (i) The system requests the DEO to specify the student-id.
- (ii) DEO enters the student-id. The system retrieves and displays the student information.
- $\mbox{(iii)}$ The system prompts the DEO to confirm the deletion of the student.
- (iv) The DEO confirms the deletion.
- (v) The system marks the student record for deletion.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

2.6 Alternative flows

2.6.1 Student not found

If in the update a student or delete a student sub flows, a student with specified_id does not exist, the system displays an error message .The DEO may enter a different id or cancel the operation. At this point ,Use case ends.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

46

Use Cases

2.6.2 Update Cancelled

If in the update a student sub-flow, the data entry operator decides not to update the student information, the update is cancelled and the basic flow is restarted at the begin.

Software Engineering (3st ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

2.6.3 Delete cancelled

If in the delete a student sub flows, DEO decides not to delete student record ,the delete is cancelled and the basic flow is re-started at the beginning.

2.7 Special requirements

None

2.8 Use case relationships

None

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

3. Maintain Subject Details

3.1 Introduction

The DEO to maintain subject information. This includes adding, changing, deleting subject information from the system

- 3.2 Actors : DEO
- 3.3 Preconditions : DEO must be logged onto the system before the use case begins.

Software Engineering (20 ml.) Dr. V. V. Annound & Vorsch Sinch, Commists C. New Ann International Bublishers 2007

Use Cases

3.4 Post conditions

If the use case is successful, the subject information is added, updated, or deleted from the system, otherwise the system state is unchanged.

3.5 Basic flows

The use case starts when DEO wishes to add, change, and/or delete subject information from the system.

- (i) The system requests DEO to specify the function he/she would like to perform i.e.
 - Add a subject
 - Update a subject
 - · Delete a subject.

ioftware Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

50

Use Cases

- (ii) Once the DEO provides the required information, one of the sub flows is executed.
 - If DEO selected "Add a subject" the "Add-a subject sub flow is executed.
 - If DEO selected "Update-a subject" the "update-a- subject" sub flow is executed
 - If DEO selected "Delete- a- subject", the "Delete-a-subject" sub flow is executed.

3.5.1 Add a Subject

(i) The System requests the DEO to enter the subject information. This includes :

* Name of the subject

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

- * Subject Code
- * Semester
- * Credit points
- (ii) Once DEO provides the requested information, the system generates and assigns a unique subject-id to the subject. The subject is added to the system.
- $\begin{tabular}{ll} \begin{tabular}{ll} \beg$

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

52

Use Cases

3.5.2 Update a Subject

- (i) The system requests the DEO to enter subject id.
- (ii) DEO enters the subject_id. The system retrieves and displays the subject information.
- (iii) DEO makes the changes.
- (iv) Record is updated.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

3.5.3 Delete a Subject

- (i) Entry of subject_id.
- (ii) After this, system retrieves & displays subject information.
 - * System prompts the DEO to confirm the deletion.
 - * DEO verifies the deletion.
 - * The system marks the subject record for deletion.

iodware Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

3.6 Alternative Flow

3.6.1 Subject not found

If in any sub flows, subject-id not found, error message is displayed. The DEO may enter a different id or cancel the case ends here.

3.6.2 Update Cancelled

If in the update a subject sub-flow, the data entry operator decides not to update the subject information, the update is cancelled and the basic flow is restarted at the begin.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

3.6.3 Delete Cancellation

If in delete-a-subject sub flow, the DEO decides not to delete subject, the delete is cancelled, and the basic flow is restarted from the beginning.

3.7 Special Requirements:

None

3.8 Use Case-relationships

None

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

4. Maintain Result Details

4.1 Introduction

This use case allows the DEO to maintain subject & marks information of each student. This includes adding and/or deleting subject and marks information from the system.

4.2 Actor

DEO

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

4.3 Pre Conditions

DEO must be logged onto the system.

4.4 Post Conditions

If use case is successful ,marks information is added or deleted from the system. Otherwise, the system state is unchanged.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

58

Use Cases

4.5 Basic Flow

This use case starts, when the DEO wishes to add, update and/or delete marks from the system.

- (i) DEO to specify the function
- (ii) Once DEO provides the information one of the subflow is executed.
- * If DEO selected "Add Marks ", the Add marks subflow is executed.
- If DEO selected "Update Marks", the update marks subflow is executed.
- * If DEO selected "Delete Marks", the delete marks subflow is executed.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

4.5.1 Add Marks Records

Add marks information .This includes:

- a. Selecting a subject code.
- b. Selecting the student enrollment number.
- c. Entering internal/external marks for that subject code & enrollment number.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogeah Singh, Copyright © New Age International Publishers, 2007

- (ii) If DEO tries to enter marks for the same combination of subject and enrollment number, the system gives a message that the marks have already been entered.
- (iii) Each record is assigned a unique result id.

4.5.2 Delete Marks records

- 1. DEO makes the following entries:
 - a. Selecting subject for which marks have to be
 - b. Selecting student enrollment number.
 - c. Displays the record with id number.
 - d. Verify the deletion.
 - e. Delete the record.

 $Software\ Engineering\ (3^{st}\ ed.),\ By\ K.K.\ Aggarwal\ \&\ Yogesh\ Singh,\ Copyright\ \bigcirc\ New\ Age\ International\ Publishers, 2007$

Use Cases

- 4.5.2 Update Marks records
 - 1. The System requests DEO to enter the record id.
 - 2. DEO enters record_id. The system retrieves & displays the information.
 - 3. DEO makes changes.
 - 4. Record is updated.

Software Engineering (3rd ed.), By K.K. Aggurwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

62

Use Cases

4.5.3 Compute Result

- (i) Once the marks are entered, result is computed for each student.
- (ii) If a student has scored more than 50% in a subject, the associated credit points are allotted to that student.
- (iii) The result is displayed with subject-code, marks & credit points.

4.6 Alternative Flow

4.6.1 Record not found

If in update or delete marks sub flows, marks with specified id number do not exist, the system displays an error message. DEO can enter another id or cancel the operation.

Software Engineering (3rd cd.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

4.6.2 Delete Cancelled

If in Delete Marks, DEO decides not to delete marks, the delete is cancelled and basic flow is re-started at the beginning.

4.7 Special Requirements

None

4.8 Use case relationships

None

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

0.4

Use Cases

5 View/Display result

5.1 Introduction

This use case allows the student/Teacher or anyone to view the result. The result can be viewed on the basis of course code and/or enrollment number.

5.2 Actors

Administrator/DR, Teacher/Student

5.3 Pre Conditions

None

5.4 Post Conditions

If use case is successful, the marks information is displayed by the system. Otherwise, state is unchanged.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

5.5 Basic Flow

Use case begins when student, teacher or any other person wish to view the result.

Two ways

- -- Enrollment no.
- -- Course code

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

(ii) After selection, one of the sub flow is executed.

Course code — Sub flow is executed

Enrollment no. — Sub flow is executed

5.5.1 View result enrollment number wise

(i) User to enter enrollment number

(ii) System retrieves the marks of all subjects with credit points

(iii) Result is displayed.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

5.6 Alternative Flow

5.6.1 Record not found Error message should be displayed.

5.7 Special Requirements

None

5.8 Use Case relationships

None

Use Cases

6. Generate Report

6.1 Introduction

This use case allows the DR to generate result reports. Options are

- a. Course code wise
- b. Semester wise
- c. Enrollment Number wise

6.2 Actors

DR

6.3 Pre-Conditions

DR must logged on to the system

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

6.4 Post conditions

If use case is successful, desired report is generated. Otherwise, the system state is unchanged.

6.5 Basic Flow

The use case starts, when DR wish to generate reports.

- (i) DR selects option.
- (ii) System retrieves the information displays.
- (iii) DR takes printed reports.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

70

Use Cases

6.6 Alternative Flows

6.6.1 Record not found

If not found, system generates appropriate message. The DR can select another option or cancel the operation. At this point, the use case ends.

6.7 Special Requirements

None

6.8 Use case relationships

None

Software Engineering (3rd ed.), By K.K Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

7. Maintain User Accounts

7.1 Introduction

This use case allows the administrator to maintain user account. This includes adding, changing and deleting user account information from the system.

7.2 Actors

Administrator

7.3 Pre-Conditions

The administrator must be logged on to the system before the use case begins.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

7.4 Post-Conditions

If the use case was successful, the user account information is added, updated, or deleted from the system. Otherwise, the system state is unchanged.

7.5 Basic Flow

This use case starts when the Administrator wishes to add, change, and/or delete use account information from the system.

- (i) The system requests that the Administrator specify the function he/she would like to perform (either Add a User Account, Update a User Account, or Delete a User Account).
- (ii) Once the Administrator provides the requested information, one of the sub-flows is executed

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

- * If the Administrator selected "Add a User Account", the Add a User Account sub flow is executed.
- * If the Administrator selected "Update a User Account", the **Update a User Account** sub-flow is executed.
- * If the Administrator selected "Delete a User Account", the **Delete a User Account** sub-flow is executed.22

7.5.1 Add a User Account

- 1. The system requests that the Administrator enters the user information. This includes:
 - (a) User Name
 - (b) User ID-should be unique for each user account
 - (c) Password
 - (d) Role

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

2. Once the Administrator provides the requested information, the user account information is added.

7.5.2 Update a User Account

- 1. The system requests that the Administrator enters the User ID.
- 2. The Administrator enters the User ID. The system retrieves and displays the user account information.
- The Administrator makes the desired changes to the user account information. This includes any of the information specified in the Add a User Account sub-flow.
- Once the Administrator updates the necessary information, the system updates the user account record with the updated information.

Use Cases

7.5.3 Delete a User Account

- 1. The system requests that the Administrator enters the User ID.
- The Administrator enters the User ID. The system retrieves and displays the user account information.
- 3. The system prompts the Administrator to confirm the deletion of the user account.
- 4. The Administrator confirms the deletion.
- 5. The system deletes the user account record.

70

Use Cases

7.6 Alternative Flows

7.6.1 User Not Found

If in the **Update a User Account** or **Delete a User Account** sub-flows, a user account with the specified User ID does not exist, the system displays an error message. The Administrator can then enter a different User ID or cancel the operation, at which point the use case ends.

7.6.2 Update Cancelled

If in the **Update a User Account** sub-flow, the Administrator decides not to update the user account information, the update is cancelled and the **Basic Flow** is re-started at the beginning.

Software Engineering (3st ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Use Cases

7.6.3 Delete Cancelled

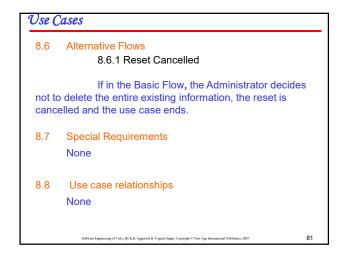

If in the **Delete a User Account** sub-flow, the Administrator decides not to delete the user account information, the delete is cancelled and the **Basic Flow** is re-started at the beginning.

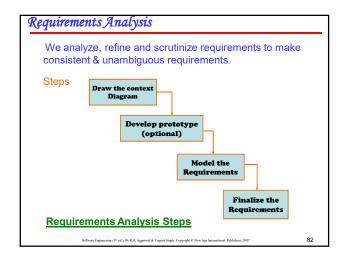

- 7.7 Special Requirements
 None
- 7.8 Use case relationships None

8. Reset System 8.1 Introduction This use case allows the allows the administrator to reset the system by deleting all existing information from the system. 8.2 Actors Administrator 8.3 Pre-Conditions The administrator must be logged on to the system before the use case begins.

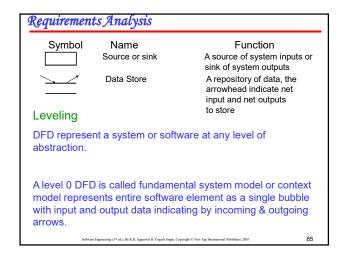

8.4 Post-Conditions If the use case was successful, all the existing information is deleted from the backend database of the system. Otherwise, the system state is unchanged. 8.5 Basic Flow This use case starts when the Administrator wishes to reset the system. i. The system requests the Administrator to confirm if he/she wants to delete all the existing information from the system. ii. Once the Administrator provides confirmation, the system deletes all the existing information from the backend database and displays an appropriate message.

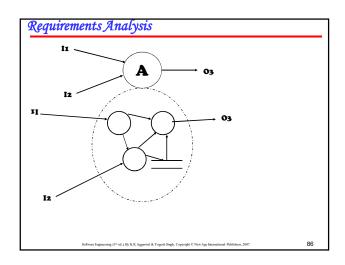

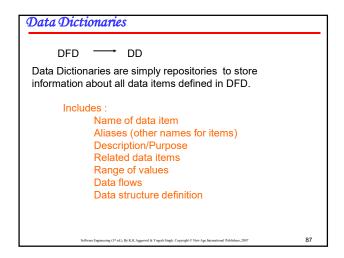

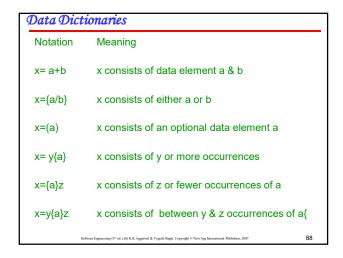

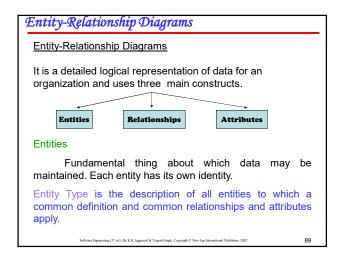

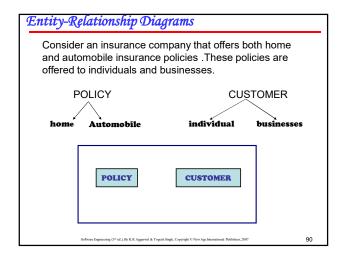

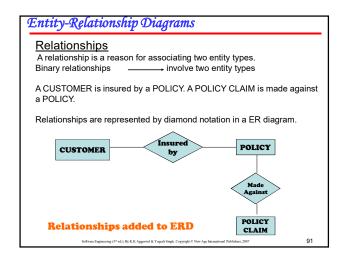

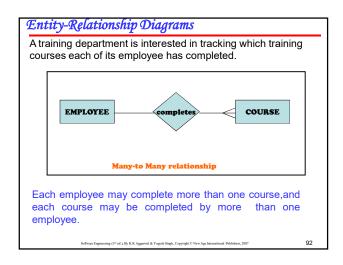

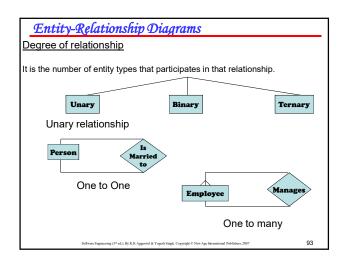

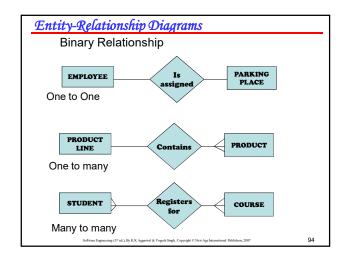

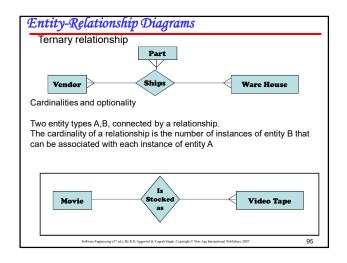

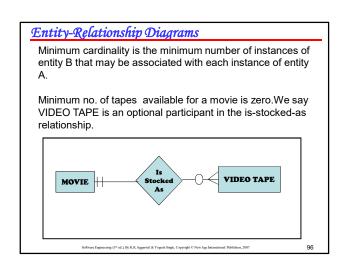

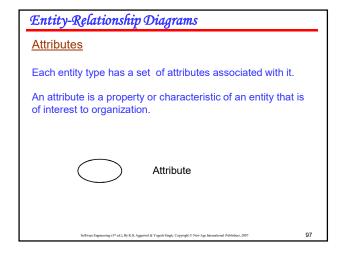

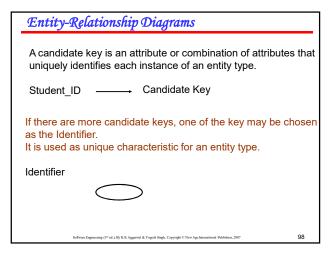

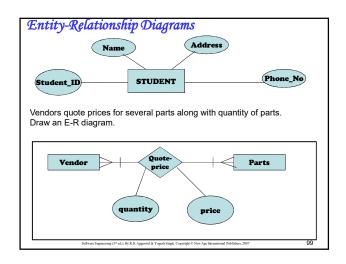

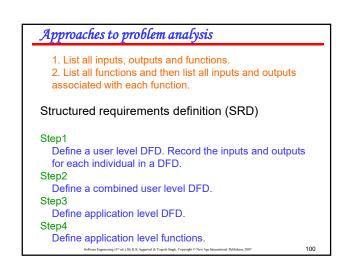

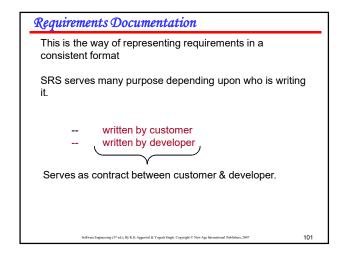

Requirements Documentation Nature of SRS Basic Issues Functionality External Interfaces Performance Attributes Design constraints imposed on an Implementation

Requirements Documentation

SRS Should

- -- Correctly define all requirements
- -- not describe any design details
- -- not impose any additional constraints

Characteristics of a good SRS

An SRS Should be

- ✓ Correct
- ✓ Unambiguous
- ✓ Complete
- ✓ Consistent

 $Software\ Engineering\ (3^{nd}\ ed.),\ By\ K.K.\ Aggarwal\ \&\ Yogesh\ Singh,\ Copyright\ @\ New\ Age\ International\ Publishers,\ 2007$

Requirements Documentation

- ✓ Ranked for important and/or stability
- ✓ Verifiable
- Modifiable
- ✓ Traceable

. . .

Requirements Documentation

Correct

An SRS is correct if and only if every requirement stated therein is one that the software shall meet.

Unambiguous

An SRS is unambiguous if and only if, every requirement stated therein has only one interpretation.

Complete

An SRS is complete if and only if, it includes the following elements

(i) All significant requirements, whether related to functionality, performance, design constraints, attributes or external interfaces.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

Requirements Documentation

- (ii) Responses to both valid & invalid inputs.
- (iii) Full Label and references to all figures, tables and diagrams in the SRS and definition of all terms and units of measure.

Consistent

An SRS is consistent if and only if, no subset of individual requirements described in it conflict.

Ranked for importance and/or Stability

If an identifier is attached to every requirement to indicate either the importance or stability of that particular requirement.

Software Engineering (3rd ed.), By K.K. Aggarwal & Yogesh Singh, Copyright © New Age International Publishers, 2007

400

Requirements Documentation

Verifiable

An SRS is verifiable, if and only if, every requirement stated therein is verifiable.

Modifiable

An SRS is modifiable, if and only if, its structure and style are such that any changes to the requirements can be made easily, completely, and consistently while retaining structure and style.

Traceable

An SRS is traceable, if the origin of each of the requirements is clear and if it facilitates the referencing of each requirement in future development or enhancement documentation.

Prototyping

Validation prototype should be reasonably complete & efficient & should be used as the required system.

...

Requirements Management

 Process of understanding and controlling changes to system requirements.

ENDURING & VOLATILE REQUIREMENTS

o Enduring requirements: They are core requirements & are related to main activity of the organization.

Example: issue/return of a book, cataloging etc.

o Volatile requirements: likely to change during software development lifer cycle or after delivery of the product
